Software Developer - role specification

This initial 'Contract to Hire' role (estimated 6 months), is to support the existing technical team with customer support and user interface development for our InterpreterLine platform and apps. The position would suit someone that wants to be part of a small, successful, long established stable company, and help maintain our market leading position in our current product areas. Would suit a graduate, looking to gain valuable experience working with technical experts in this field. We are open to discussion concerning employment/contract status.

Responsibilities:

- Design & own a unified user experience across multiple platforms (Web, Desktop and Mobile devices) and products within the business
- Maintain legacy products and interfaces and bring them in line with the next generation products
- Work directly with customers to gather iterative feedback to help feed back into the development cycle
- Write functional documentation for internal and external users based on feedback and common problems that arise
- Promote usability and accessibility best practises across all products

Personal qualities

- Should possess the energy and drive to get involved in complex technologies of a mission critical nature.
- Should have an exploratory and self-learning mind-set, not needing hand-holding or spoon-feeding.
- Should have an aptitude for learning and mastering new technologies as required.
- Should be keen to provide the very best support of the existing system for the business and its customers.
- Should be able to work remotely, in a team, and actively contribute.

Technical skills

1. Primary

These skills or similar should ideally already be possessed in order to get quickly up to speed on the systems.

- Backend: MySQL database engine and SQL Queries, Python, Flask, Linux Administration
- User Interface: PHP, HTML, Sass, Javascript, Angular, Typescript, UI/UX Principles
- Mobile: Ionic, Typescript, Angular, Javascript, IOS, Android

2. Secondary

Familiarity with some of these development tools would be useful:

- Git
- SSH
- Understanding of WebRTC, TURN/STUN Services & Video Communication
- Jira
- Linux
- Agile principles

Location: Rickmansworth area   **Remuneration:** Commensurate with experience
